The WIVAMAC[®] universal carver's clamp is the only heavy duty carver's clamp produced by a woodworking machine manufacturer. With its ball swivel, it provides full access with single lever operation. Thanks to the unique clamp system with a 360° omnidirectional articulation, one can carve heavy and complex shapes in any position.

After unlocking the device by simple loosening the handle one can position the workpiece easily in any required position and lock it again.

The handle has a position setting system to enable repositioning it to the best ergonomical working position for the carver, minimising effort and maximising ease of use.

Complete with mounting plate (105mm x 60mm, with 4 x 6.5mm diameter holes) for mounting the workpiece. This mounting plate can be removed from the ball swivel to easily fix the workpiece on it.

Clamp designed for bench mounting. The SPB1050 WIVAMAC[®] Woodcarvers clamp itself can easily be fixed on a work bench with a simple woodscrew, M12 bolt or strong wood clamp.
